

LED 3W headlamp, 120lm, 1200mAh Li-Po, movable head

Marka: **Virone** | Symbol: **LT-6** | Ean: **5908254817397**

ViRONE

PRODUCT DESCRIPTION

This headlamp is mounted directly on the forehead or the helmet with the use of special straps, that ensure its firm position on the head and allow to comfortably adjust their length to individual needs. The non-contact switch has a built-in sensor which allows to turn on the flashlight with a hand movement, which is extremely practical and makes it easier to use when we wear thick gloves or when our hands are not free. Thanks to the movable head, it is possible to adjust the lighting angle (within the 45° range). The device is powered by a lithium-polymer battery, charged via the Micro USB port, which offers a wide range of applications. The light

source has the form of a CREE XPE LED 3W diode which, despite the miniature matrix size, provides high lighting power and is perfect for use in this type of product, because it requires little cooling. The product has 4 operating modes: 100% white light / 30% white light / SOS / sensor mode. Lighting time: 9h. Charging time: 3.5 h.
