## Wireless weather station with indoor and outdoor temperature indicator, grey and white

A modern wireless weather station that is of great use in every house. The external sensor uses radio frequency of 433MHz to send data to the indoor station. A backlit, monochrome LCD display provides information on outdoor and indoor temperature. It also informs about recent temperature trends. You can choose between either Celsius (°C) or Fahrenheit (F) degrees. It can be upgraded by two additional external sensors. Colour option: grey and white.

Temperature measurement:

Type of power supply:  
via battery

Range in the open area:  
60m
