Electronic door viewer with integrated motion sensor and 4.3" LCD screen, image and video recording on Micro SD card, menu in 4 languages, remote control via Tuya APP, inbuilt battery

This video viewer replaces the traditional optical peephole. It allows you to view a person standing directly in front of the door on a 4.3-inch color LCD screen. The device can record video and photo files to a Micro SD memory card, with a maximum capacity of 128GB (card not included). The inbuilt motion sensor increases your safety level by recording images, after motion has been detected in 2m detection range. The menu of the device is very transparent and can be operated in one of 4 languages: Polish, English, German or Russian. Additionally, the viewer is supported by free TUYA application thanks to which you can view the images and videos remotely on your smartphone (only internet connection is required). IR diodes ensure good-quality image at night or when ambient light is limited. It is a discreet camera that can be mounted in place of a standard optical viewer inside a 14 mm - 35 mm hole. The device is especially helpful for elderly or short people and people with poor eyesight.
